WORK EXPERIENCE

Resource Staffing Solutions (RSS) | Clark, Pampanga

Web Developer (Full-time) | Jul 2026 – Present

- Lead the consolidation of Harley from a standalone HRIS into a centralized internal platform used by **150+ employees**, bringing timekeeping, inventory, procurement, and ticketing onto shared user accounts, roles, and data.
- Automated the full asset lifecycle, from purchase order to assignment and accountability, giving the company a **single record** of where each asset is and who is responsible for it.
- Overhauled the ticketing system with SLA tracking, giving management measurable **response and resolution times** for every employee ticket.
- Accelerate delivery with **AI coding assistants** (Claude, OpenAI Codex) for module planning, data modeling, and debugging, reviewing and testing every change before release.
- Collaborate through **Linear**, logging every new feature, bug fix, and improvement as a ticket and taking each through **pull request review, staging tests, and production release**.

Junior Web Developer (Consultant) | Aug 2025 – Jun 2026

- Built Harley, the company's web-based HRIS (PHP, Laravel, React, JavaScript, MySQL, Tailwind CSS), starting with timekeeping: attendance, schedules, and leave and overtime requests.
- Designed approval workflows with **role-based access control** and secure request validation, limiting each user to the data and actions their role allows.
- Automated **payroll-ready attendance reports** and Excel exports (PhpSpreadsheet), giving payroll a single system-generated source of attendance data.
- Built admin dashboards for attendance summaries, employee activity, and HR operations, plus an internal ticketing system where employees submit and track concerns.

Ghost AI Solutions | Remote

Freelance Full-Stack Developer | Sep 2026 – Present

- Built a **custom CRM** that captures leads from the client's website and tracks each one from first inquiry to completed job.
- Automated free-estimate delivery to prospective customers and converted accepted estimates **directly into scheduled jobs** without re-entering data.
- Implemented **geolocation-verified clock-in** (Geolocation API) to confirm employees are on site when they start work.
- Added **post-job checklists and receipts**, giving the business a documented record of every job from lead to receipt.

PROJECTS

SouqIntel: AI-Assisted Product Discovery Platform

Full-Stack Developer | React, Express.js, MongoDB, Ollama | Feb 2026 – Apr 2026

- Designed an AI shopping assistant powered by a locally hosted language model (Ollama) that recommends products from user preferences, keeping user data in-house with no per-request API costs.
- Built the full-stack platform with REST APIs, a structured MongoDB product catalog, and reusable React search and filter components.

TECHNICAL & AI SKILLS

AI-Assisted Development: Claude, OpenAI Codex, Ollama (local LLMs), OpenAI API

Business Systems & Automation: HRIS, CRM, inventory and procurement workflows, ticketing with SLA tracking, approval workflows, role-based access control

Languages & Frameworks: PHP, Laravel, JavaScript, HTML/CSS, Tailwind CSS, React, Node.js, Express.js, Flutter/Dart

Data, APIs & Integrations: MySQL, MongoDB, Firebase (Auth, Firestore), REST APIs, Geolocation API, PhpSpreadsheet

Tools: Git, GitHub, Linear | **Familiar with:** TypeScript, Python

EDUCATION & CERTIFICATIONS

Bachelor of Science in Computer Engineering | University of the Assumption, San Fernando, Pampanga | Jun 2026

- Career Essentials in GitHub Professional Certificate – GitHub (2025)
- Programming with Python Professional Certificate – OpenEDG Python Institute (2025)
